Severn Wye Energy Agency Launches a Branch Office in Wales

The efforts to reduce carbon emissions and fight climate change, were increased this week with the appointment, by Severn Wye Energy Agency (SWEA), of its first Project Officer to be based in a Wales branch office. SWEA has been operating out of its Forest of Dean base for almost 10 years and has a mission to work for sustainable energy and affordable warmth in the South West of England and Wales.

Catrin Maby, Director of SWEA said “We have been active in Wales for some time now and felt that the timing is right to establish an office within the country to strengthen the work and provide a better service to our existing and potential clients. We are really pleased that Andy Bull, formerly with Powys County Council, has joined us and that Stuart Davies (also of Powys CC) will be added to the team on the 1st July. They both have a wide range of skills and experience but in slightly different fields – they make a very good combination.”

Andy Bull, is a town planner and is particularly keen to work with planning authorities and developers, in order to achieve improved energy performance in new development and the facilitation of renewable energy developments. Stuart has a background in energy efficiency in the domestic sector and has a reputation for innovation and determination in this field.
